

# User Guide

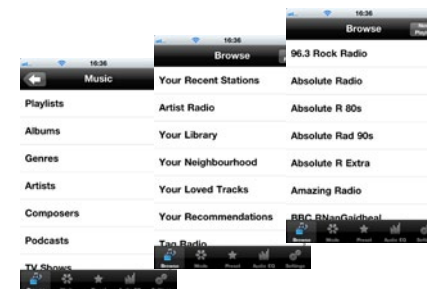

This innovative and easy-to-use application not only acts as a full remote control to select DAB, FM, Internet Radio, Last.fm, and control volume up/down, play, pause, love/ban and EQ settings, but also enables users to access and control the playback of their entire music library from any connected PC, Mac or DLNA-compliant device. Multiple devices attached to the network can be selected and controlled by the App individually.

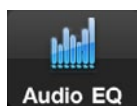

Use Mode to change between any of the modes on your Radio

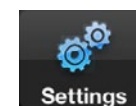

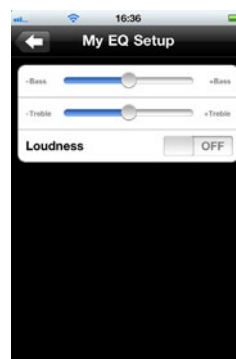

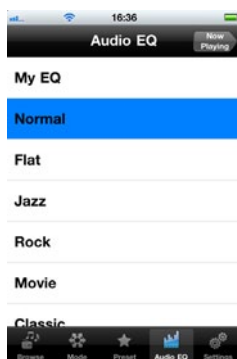

Browse your radio stations or music library

Use this to choose a preset while in Internet Radio, DAB or FM mode

Select Audio EQ to choose an EQ profile, or create a custom EQ

Choose settings to change between radios, power your radio on or off or to Disable Auto-Lock while the App is in use
